

nakedEYE

tiny VR-CAMERA

360° / 4K / global shutter / 12bit RAW

nakedEYE - a professional VR-camera of miniscule size. It is a high quality, high resolution, full 360° VR-capture system for the production of cinematic VR-content.

nakedEYE is the best solution for unique POV-style VR-shots from moving objects, vehicles, athletes and remote locations, immersing the viewer in extraordinary experiences from the most thrilling viewpoints.

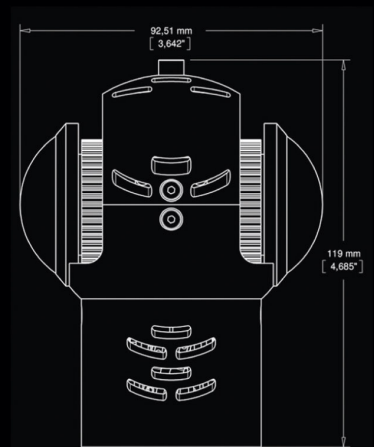

nakedEYE features two large format global shutter sensors of the latest generation with superior dynamic range and excellent low-light performance.

The square high speed sensors have a resolution of 2kx2k each and are fully synchronized. Furthermore, you have full control over all camera settings all the time.

Indiecam provides a custom stream-lined post-production workflow for **nakedEYE**, leveraging state-of-the-art stitching algorithms and the benefits of a high-end RAW-workflow.

The tiny camera covers the entire 360° sphere in a resolution of 4k while measuring only 79mm (3.09in) in diameter and weighing a mere 380g (13.4oz).

The robust system records CinemaDNG RAW, the industry-leading RAW-format which was spearheaded by Indiecam. It now proves to be the best choice - even in VR.
