## iris focus control motor unit - brackets - gear rings

If you need a small and accurate iris focus control, the indieIFC is the way to go.

The versatile and modular system can be mounted on any side of all Indiecama camera models. Due its minimal dimensions it allows you to control unseen POV shots in the tightest environments. With a weight of only 120 g in full 2 motor configuration it also can be easily mounted on a helmet or R/C drone. In single motor configuration you could even save another 30% of weight.

The indieIFC was originally designed to operate with the well established cmotion system, but can also be used with a wide range of other controllers. Precise control and shock proof usability is achieved by using highest quality motors in combination with accurate gear sets, which already has been used on huge Hollywood productions like Ron Howard's RUSH (release date fall 2013). An ideal solution for iris focus control where size, weight and flexibility matters i.e. 3D setups.

The indieIFC is available in one or two motor configurations for all the industry's gear-sizes and we offer custom made gear rings for all available lenses. All indieIFC parts can be purchased separately to combine the perfect setup according to your needs.

### HIGHLIGHTS

- » Ultra compact iris focus control
- » 100% compatible with the cmotion system
- » Plug & play functionality
- » Complete setup weights only 120 g
- » Adapts to almost every C-mount lens
- » Modular setup available in one or two motor configuration

**BRACKET**  
[mounting plate]

The versatile and modular system can be mounted on any side of all available Indiecama camera models.

**MOTOR UNIT**  
[for iris & focus]

The highly flexible motor units can be adjusted to any C-mount lens due to its unique design.

**GEAR RINGS**
